Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently amended) Plumbing spout device (4) comprising a mounting sleeve (7) having an external thread, which is connected to a water spout, having an internal [[tread]] thread, of a plumbing water spout fitment (1) via a screw connection, and ~~also with~~ a ~~jet regulating~~ flow rectifying device (5), with an attachment screen (6) being connected upstream of the ~~jet regulating~~ flow rectifying device in a direction of flow ~~and with the jet regulating~~ , the flow rectifying device (5) being provided as a perforated plate and having a perforated area at least in a partial region thereof, an outflow-side ~~jet regulating~~ of the flow rectifying device (5) is arranged ~~on a spout side sleeve end region~~ at an outlet of the mounting sleeve (7) and the ~~jet regulating~~ flow rectifying device (5) is ~~formed in one piece on~~ integral with the mounting sleeve (7), the spout device (4) has a contoured outer end face ~~outline and/or a contoured outflow end side~~ tool attachment surface projecting beyond the thread in the outlet direction for a tool insert.

2. (Currently amended) Spout device according to claim 1, wherein a screen-like or grating-like insert part or functional element is connected between the attachment screen (6) and the ~~jet regulating~~ flow rectifying device (5).

3. (Currently amended) Spout device according to claim 1, wherein the attachment screen (6) is connected directly upstream of the ~~jet regulating~~ flow rectifying device (5) without an intermediate connection of other installation parts

or functional units.

4. (Cancelled)

5. (Previously Presented) Spout device according to claim 1, wherein a throughput regulator or a throughput limiter is connected upstream of the attachment screen (6) in the direction of flow.

6. (Currently amended) Spout device according to claim 1, wherein the attachment screen (6) directly contacts a supply side of the ~~jet regulating~~ flow rectifying device (5) at least with an outer edge region thereof.

7. (Previously Presented) Spout device according to claim 1, wherein the attachment screen (6) has a conical shape.

8. (Currently amended) Spout device according to claim 1, wherein a housing neck (8) connected downstream of the ~~jet regulating~~ flow rectifying device (5) on the outlet end of the spout device (4) is provided for forming a jet.

9. (Currently amended) Spout device according to claim 1, wherein the ~~jet regulating~~ flow rectifying device (5) is connected to the mounting sleeve (7) via a weld, adhesive, clip, or screw connection.

10. (Cancelled)

11. (Previously Presented) Spout device according to claim 1, wherein the outflow end side of a spout device has contouring formed from end-edge projections

and recesses, such that the recesses of the spout device held in a spout fitment are used as tool attachment surfaces for the projections of another spout device that can be used as a tool insert.

12. (Currently amended) Spout device according to claim 1, wherein the perforated area of the ~~jet-regulating~~ flow rectifying device formed as the perforated plate has a honeycomb-like structure.

13. (Currently amended) Spout device according to claim 1, wherein the perforated area of the ~~jet regulating~~ flow rectifying device is divided by approximately radial longitudinal walls and approximately concentric peripheral walls into approximately circular segment-like throughput holes.

14. (Previously Presented) Spout device according to claim 1, wherein the spout device is embodied as a jet regulator, jet disrupter, or flow straightener.
